COLORBOND® ULTRA™ - COLOUR FOR THE EXTREME

COLORBOND® ULTRA™ steel as part of the COLORBOND® Premium range, has been specially developed to withstand tough Pacific Island conditions. COLORBOND® ULTRA™ prepainted steel is the recommended roofing product for coastal areas where an attractive and durable product is required. It provides a superior level of service life and performance on buildings that are either short distances from surf

beaches, industrial plants around port areas or any inland buildings. Increasingly Architects and Specifiers are insisting on COLORBOND® ULTRA™ prepainted steel for inland buildings where superior durability is recognised by the astute property owner or developer as providing longer term value and improved capital payback.
